

Florencia Chiapero / Colaborator member

Ever since a young age, she enjoyed being outdoors and spending long hours observing her cat's behaviour. After three years of studying Law, she finally decided to follow her true passion. That is how in 2018 she obtained her Biology degree from the Universidad Nacional de Córdoba, Argentina. Even though she had always been interested in felines, for her Bachelor Thesis she studied lesser anteaters combining two perspectives: ethology and ethnobiology. After graduating, she volunteered in different conservation projects and since 2019 collaborates with the Andean Cat Alliance. Particularly, her field of interest is the problems surrounding the ecology and conservation of felines, as well as the search for solutions for the human-wildlife conflict.

Furthermore, as a Biologist, she believes it is fundamental to promote science communication. This is why since 2017, she participates as a member of diverse environmental education projects that aim to inform and raise awareness about wildlife trafficking and the importance of biodiversity conservation.
