

Mg.Cs. L. Fabián Beltrán-Saavedra / Collaborator Member

He is a veterinary researcher with a postgraduate degree in zoology and works at the Wildlife Conservation Society (WCS). He is interested in comprehensive ecosystem health and parasitic ecology at the wildlife-domestic animal-human interface. He has conducted studies on health, parasitology, and parasitic ecology mainly of mammals of the Andean region with emphasis on vicuña, Andean cat, pampas cat and Andean fox, and on domestic animals with which they share ecosystems, for in situ conservation purposes. He has also studied ecological patterns of ornithofauna. He has experience in the biological-veterinary management of vicuña, armadillos, high Andean flamingos, Andean cat and other small felines, for ex situ conservation purposes, and in his spare time he observes, identifies and records fauna and flora.
